

# Why your business needs SignalVoice

## What is SignalVoice?

It is a cloud-based phone system, that uses your internet connection to make calls! SignalVoice is a revolutionary phone system that will keep you connected and communicating at all times.

The system has all the features you could possibly need, including a mobile app that lets you make and receive calls using your office number, anywhere.

When these systems were first released they were often unreliable, however this is not the case today. The main reason for this is that broadband across the UK has improved significantly over the past few years.

## A word from the experts

SignalVoice is fully customisable, choose the features you need and make it your perfect phone system - you're in control!

# The big switch off - Be prepared!

## Whats happening?

Openreach have announced that big changes are coming to telephone lines. They are going to be switching off traditional ISDN and PSTN lines completely by 2025.

As of September 2023 you will no longer be able to install a new line or add to your existing ISDN/PSTN system.

## Why is this happening?

To put it bluntly, it's quite simply old technology. We have been using it for decades, and it's now time to make use of newer technologies.

Internet connections are now faster and more reliable, it makes a lot of sense to use your internet connection to power your phone system.

## What should I do?

You can future-proof your business by switching to a cloud-based phone system, such as SignalVoice! It is recommended to transfer over to the new phone systems early, to avoid last minute panic! We can give you our expert advice on the best solution for your needs.

## Did you know?

As of Summer 2020, there are approximately 5.3 million PSTN and ISDN lines yet to make the switch to a cloud-based phone system.
