# Move from Android to iPhone

Apple have made the switch from Android to iPhone simple. In this short guide we will take you through the simple steps to transfer your data over to your brand new iPhone.

## Before you begin:

- On your Android device, make sure that Wi-Fi is turned on.
- Plug your new iOS device and your Android device into power.
- Make sure that the content you're moving, including what's on your external Micro SD card, will fit on your new iOS device.
- If you want to transfer your Chrome bookmarks, update to the latest version of Chrome on your Android device.

# The Steps

## Step 1

### Tap move data from Android

While you set up your new iOS device, look for the Apps & Data screen. Then tap Move Data from Android. (If you've already finished setup, you need to erase your iOS device and start again. If you don't want to erase, just transfer your content manually.)

## Step 2

### Open the Move to iOS app

On your Android device, open the Move to iOS app and tap Continue. Read the terms and conditions that appear. To continue, tap Agree, then tap Next in the top-right corner of the Find Your Code screen.

## Step 3

### Wait for a code

On your iOS device, tap Continue on the screen called Move from Android. Then wait for a ten-digit or six-digit code to appear. If your Android device shows an alert that you have a weak Internet connection, you can ignore the alert.

## Step 4

### Use the code

Enter the code on your Android device. Then wait for the Transfer Data screen to appear.

## Step 5

### Choose your content and wait

On your Android device, select the content that you want to transfer and tap Next. Then – even if your Android indicates that the process is complete – leave both devices alone until the loading bar that appears on your iOS device finishes. The whole transfer can take a while, depending on how much content you're moving.

Here's what gets transferred: contacts, message history, camera photos and videos, web bookmarks, email accounts, and calendars. If they're available on both Google Play and the App Store, some of your free apps will also be transferred. After the transfer is complete, you can download any free apps that were matched from the App Store.

## Step 6

### Set up your iOS device

After the loading bar has finished on your iOS device, tap Done on your Android device. Then tap Continue on your iOS device and follow the on-screen steps to finish setup for your iOS device.

## Step 7

### Finish

Make sure that all of your content has been transferred. Music, Books and PDFs need to be moved over manually. Need to get the apps that were on your Android device? Go to the App Store on your iOS device to download them.
